

ABADA PLATFORM

Transactional ACID Rails for Autonomous AI Agents

MISSION-CRITICAL AGENTIC
ORCHESTRATION

THE INFRASTRUCTURE STANDARD FOR THE AGENTIC ERA

Moving from probabilistic chat to deterministic, durable
business execution.

THE ENTERPRISE AI GAP

Chaotic Agent Swarms

Frameworks like CrewAI and LangGraph offer probabilistic flexibility but lack ACID state guarantees. Execution is volatile, hallucinations are unmanaged, and costs spiral without guardrails.

Rigid Legacy Engines

BPMN engines like Camunda treat AI as a simple REST connector. They lack the native reasoning loops and "Function Calling" capabilities required for modern autonomous agents.

DETERMINISTIC RAILS

Abada provides the "Rails" for agents. We enforce deterministic rules over probabilistic actions. Our engine ensures every agent decision is bounded, recorded, and recoverable.

Built for scale. Designed for reliability.

TRANSACTIONAL INTEGRITY

ACID

STATE GUARANTEES

Bulletproof Persistence

Unlike volatile frameworks, Abada uses a PostgreSQL-backed engine with native "SKIP LOCKED" lease management. If a worker crashes, the process state survives. No lost transactions. Ever.

$$\text{State} (T_{n+1}) = \text{Commit} (\text{State}_n + \Delta \text{AgentAction})$$

THE INSIGHT ENGINE

Self-Optimizing Workflows

Abada is the only engine that reads its own execution telemetry. The Insight Engine analyzes P95 latencies and failure nodes to generate APL (YAML) patch proposals.

"Gemini analyzes the failure, writes the fix, and submits a Pull Request for human approval."

THE ABADA STACK

Abada Studio

Web-based IDE for authoring agentic processes (APL) and JSON forms with real-time AI assistance.

Abada Engine

PostgreSQL-native orchestration engine managing leases, retries, and transactional boundaries.

Agent Worker

Stateless Gemini-powered executors with dynamic tool registries and strict capability scopes.

DEVELOPER-FIRST APPROACH

-  **Pure GitOps:** No proprietary DB blobs. Workflows (YAML) and forms (JSON) live in Git, the single source of truth.
-  **CLI Driven:** Launch the entire local development stack in 30 seconds with ``curl | bash``.
-  **SRE Rigor:** 323+ automated test gates ensure engine integrity and recovery logic works under peak load.
-  **OpenTelemetry:** Native observability built for backend engineers and SRE teams.

HIGH-STAKES OPERATIONS

Fintech

KYC exceptions, merchant onboarding, and fraud escalation loops with zero data loss.

GovTech

Reliable citizen request routing
and auditable policy execution at
national scale.

Logistics

Real-time autonomous exception handling in delivery supply chains with OTel monitoring.

FOUNDER AUTHORITY

Patrick Bashizi

Senior SRE & Infrastructure Expert.

Built national-scale digital infrastructure and regulated platforms across Central Africa. I don't build probabilistic tools; I build transactional systems where a lost state is a real revenue loss.

"Infrastructure for when failure is not an option."

COMPETITIVE LANDSCAPE

Feature	ABADA ENGINE	CAMUNDA 8	CREWAI / LANGGRAPH
AI Reasoning	Native Agentic Loop	Static REST Connector	Unstructured Swarm
State Model	ACID (PostgreSQL)	Eventual (Zeebe)	Volatile / Local
Governance	GitOps / YAML / JSON	XML / BPMN 2.0	Python / Code only
Optimization	Insight Engine (Auto-PR)	Passive Dashboards	Manual Refinement

PARTNERING WITH GOOGLE

Accelerating Gemini as the Brain of Global Enterprise
Infrastructure.

Applied AI Lab: Integration of Gemini structured multimodal logic into durably governed ACID workers.

SaaS Roadmap: Launching `abada.cloud` - The managed orchestration layer for African Enterprises.
