

Build processes that improve with every execution

Durable orchestration for AI agents, people and systems — with evidence-driven, human-governed change.

AI workflows need an operational lifecycle

A model response takes seconds. A business process may run for days.

DURABLE STATE

Work must survive restarts and long waits.

DETERMINISTIC CONTROL

Decisions and retries cannot depend on model improvisation.

HUMAN AUTHORITY

People must own approvals, exceptions and change adoption.

OPERATIONAL EVIDENCE

Attempts, latency, failures and outcomes must remain observable.

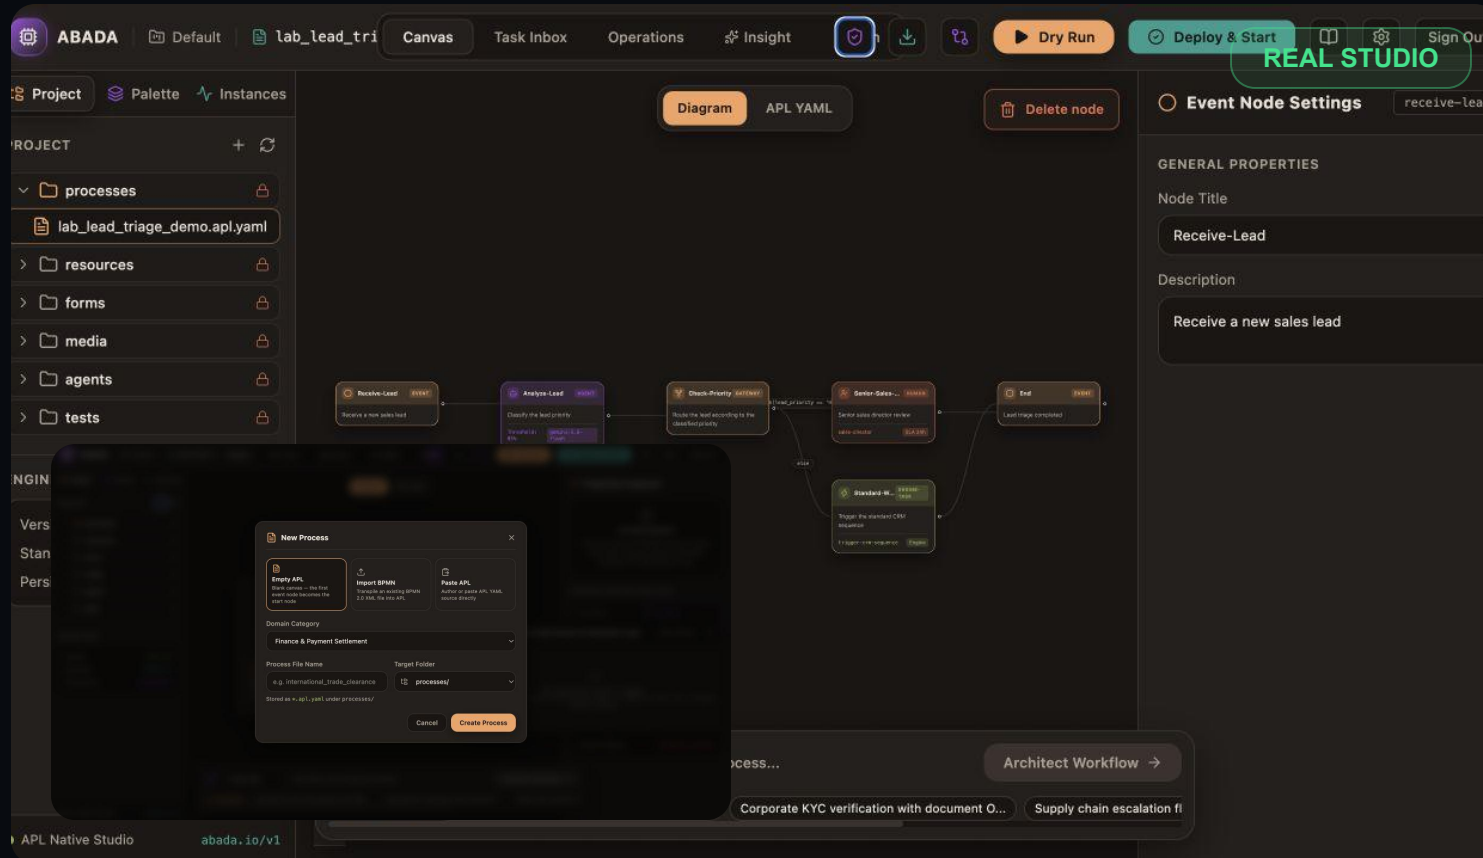

Abada connects these requirements in one governed lifecycle.

One platform for the full process lifecycle

Every participant advances the same versioned process state.

Create intelligent processes

Multiple entry points

Visual

Start from a blank canvas.

AI-assisted

Describe a process in plain language.

Native

Author or paste reviewable APL.

Interoperable

Import the supported BPMN subset.

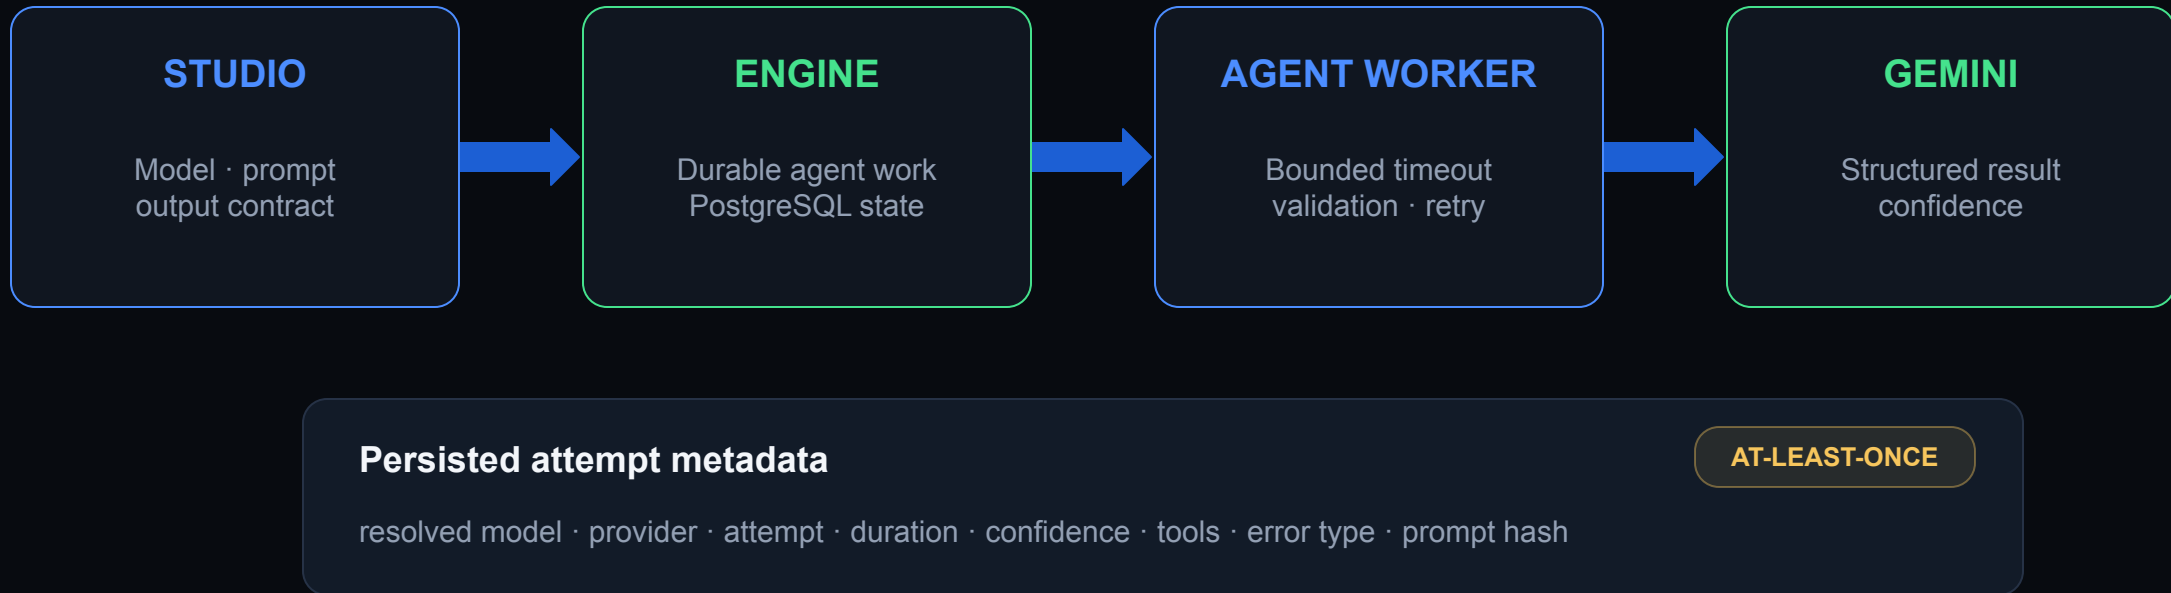

Safe to explore

Dry Run stays local and mocked.

APL is the native representation beneath Studio — not the whole product story.

Gemini becomes a governed workflow participant

The model call is outside the workflow transaction. Its accepted result re-enters through the durable worker contract.

Validated output drives deterministic routing to a person or system.

Insight turns evidence into governed improvement

Gemini 3.6 Flash

4 persisted LOW runs

FALLBACK_THRASH

The LLM proposed an explicit LOW rule. The definition remains unchanged until a person approves it.

NOT APPROVED

Reliable and accountable by design

1.0.0-rc.4

Published evaluation release candidate

323

tests passed in the recorded release gate

PostgreSQL authority

Mutable process state is database-authoritative.

IMPLEMENTED

Recovery

Leases, retries and restart-safe acquisition.

IMPLEMENTED

Atomicity

State, work, history and outbox commit together.

IMPLEMENTED

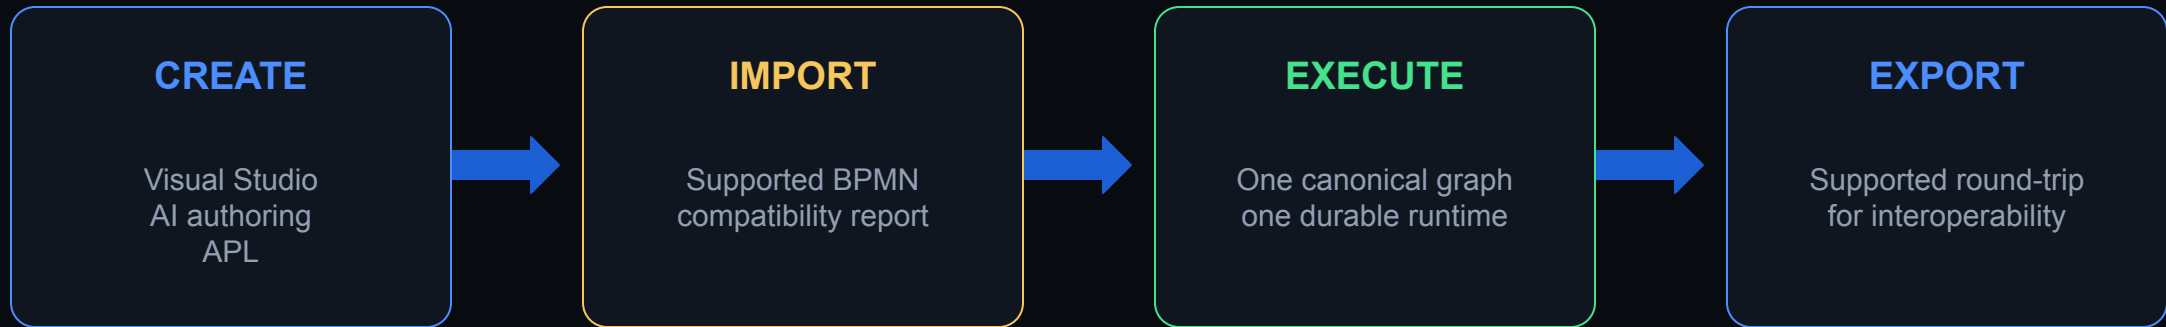

Governance

Backend RBAC, audit and immutable versions.

IMPLEMENTED

Create natively. Import when needed.

Interoperate across new processes and existing investments through an explicit compatibility boundary.

LIMITED

Standard BPMN 2.0 · Abada-native extensions · documented Camunda 7 profile

Unsupported execution semantics fail explicitly. Abada does not claim full BPMN coverage.

Built for high-stakes operations in Africa

BANKING

KYC · credit exceptions
fraud review

TELECOM

Onboarding · incidents
escalation

AGRITECH

Producer cases · documents
field-data routing

GOVTECH

Citizen requests
auditable approvals

Commercial path

NOW

Open-source core

FUTURE

**Managed hosting
Enterprise support**

Self-hosting keeps deployment and
data-location choices with the operator.

Target use cases — not customer traction or invented market size.

Turn Gemini capabilities into reliable workflow primitives

Three-month focus

- | | | |
|----|------------------------------------|--|
| 01 | Governed function calling | Structured external actions with operator-controlled tools. |
| 02 | Multimodal agent nodes | Document and image understanding inside durable processes. |
| 03 | African-language evaluation | Measure and improve process interactions across local languages. |
